Intensity

You can also change the colour intensity by dosing Colour Pack C in different percentages (25%, 50%, 100%) or in specific and customized dosages.

Finish

The choice of protective surface treatment may change the effect and intensity of the final colour. You can choose between three different finishes:

Texture

Depending on the desired surface texture: rough, medium smooth or very smooth, you can apply one or more coats of Micro-topping BC - Base Coat or Micro-topping FC - Finish Coat.

Get ready

Discover all the features of this innovative material: from the idea to the application method. Micro-topping transforms the space that surrounds you with just 3 mm of thickness by handmade, artisan application. The result is a continuous surface with original and contemporary aesthetics. Its unique technical characteristics are proven and certified by numerous tests.

Micro-topping

Micro-topping is an innovative material for renovating floors, walls and many types of surface, giving your surroundings an exclusive touch. Suitable for both interior and exterior decoration, Micro-topping is practical, innovative and quick.

You can personalize any surface by varying its colour, effect and finish, creating exactly the look you want in just a few days.

Each application is unique, done by hand by professionals from the Ideal Work network. It is perfect for new buildings giving them a minimal, contemporary and continuous appearance but equally so for renewing existing surfaces. Micro-topping is a "green" system as the particular blend of liquid polymer and a cement mixture of which it is composed, respects the environment. It is also "smart", because it meets modern requirements for adaptability, transformation and change.

During installation it helps in reducing to a minimum any dust, plaster flakes, rubble and all the other clutter from normally bothersome restoration works.

Harmonious, resistant and a work of craftsmanship, Micro-topping is simple to apply and, at only 3 millimetres thick, capable of giving your surroundings a whole new look.

Renew your surroundings with micro-topping

Micro-topping is a new way to transform the space around you, giving a natural effect and adding great architectural value to any environment that needs to be covered, renewed or created from zero.

It is perfect for private homes, from kitchen to bathroom, equally beneficial for businesses, showrooms or exterior areas, be it for poolside or restaurant, store or shopping centre.

Continuity

One of the greatest advantages of Micro-topping is the possibility of applying it without the limitations imposed by joints, inside or outside, on floors or walls, indeed any surface or object in general.

This makes Micro-topping the ideal finish for all those who hate the fiddly grouting between one brick and another.

With Micro-topping you can create an airy, linear and spacious ambience and give rein to your ideas, seamlessly.

Micro-topping has no limits

Micro-topping can be applied both on level surfaces and in 3D, vertically and horizontally, indoors and outdoors and even on objects such as furniture.

In this way, Micro-topping allows you to create an even more continuous, minimal and contemporary space.

You can give free rein to your creativity: Ideal Work trained installers can adapt Micro-topping to any of your designs or projects, without constraints of size, in order to give greater continuity to your ideas..

Beautiful to look at and touch

Micro-topping can give almost any surface an extremely natural material effect and an original, contemporary aesthetic. You can choose from a vast range of available colours, personalising the effect – shiny, cloudy, variegated, hazy or with decorative inserts - and even choose the final touch by opting for a shiny, opaque or natural effect finish

Colours and finishes

Micro-topping is available in two standard colours, white and grey, but you can still get the colour you prefer. During the mixing phase you can add Colour Pack C, a special liquid pigment available in several colours and shades. The choice of protective surface treatment may further change the effect and intensity of the final colour – natural, matt or glossy - depending on your preferences and your style.

Texture

Micro-topping is composed of two cementitious mixtures: Micro-topping BC (Base Coat) is the first coat, which contains a high grade of aggregates. Micro-topping FC (Finish Coat) has finer particles to provide a smooth finish. Depending on the desired surface texture, you can apply different combinations of these two mixtures.

Material - an innovative blend of liquid polymer and a cement mixture

Micro-topping is a protective and resistant material with many of the aesthetic characteristics of concrete. Applied with a thickness of only 3 millimeters, Micro-topping can cover virtually any type of solid surface due to its remarkable adhesive properties. The result is a custom made application, realized in a few simple steps, which reflects the needs and wishes of the client.

Naturally crafted

Micro-topping is made by mixing water-based polymers which are entirely free of volatile organic compounds (VOC) with natural, cement-based ingredients. Micro-topping is a work of craftsmanship: the compound is never prepared in advance but is mixed to order on site by the skillful hands of Polished Concrete Co.'s trained and approved installers.
